

CLAIMS

1. A resin composition having an easy-openable property which comprises an ethylene polymer composition (D) comprising 5 to 65 wt% of a propylene polymer (A), 1 to 35 wt% of an ethylene/α-olefin random copolymer (B) having a density of less than 895 kg/m³ and 10 to 85 wt% of an ethylene polymer (C) having a density of 895 kg/m³ and more (in a total amount of 100 wt%).

2. The resin composition having an easy-openable property according to claim 1, wherein the propylene polymer (A) is a propylene/α-olefin random copolymer.

3. The resin composition having an easy-openable property according to claim 1, wherein the ethylene/α-olefin random copolymer (B) is a random copolymer with an α-olefin having at least 4 carbon atoms and has a crystallinity in the range of 5 to 40% as measured by X-rays.

4. The resin composition having an easy-openable property according to claim 1, wherein the ethylene polymer (C) is low density polyethylene having a density of 895 to 925 kg/m³, medium density polyethylene having a density of greater than 925 kg/m³ and up to 940 kg/m³, or high density polyethylene having a density of greater than 940 kg/m³ and up to 970 kg/m³.

5. The resin composition having an easy-openable property according to claim 1, wherein an inorganic filler is added in an amount of not greater than 10 parts by weight, based on 100 parts by weight of the ethylene polymer composition (D).

6. A heat sealable material for the propylene polymer, which comprises the resin composition having an easy-openable property according to any one of claims 1 to 5.

7. A heat-sealable film comprising the resin composition having an easy-openable property according to any one of claims 1 to 5.

8. A heat-sealable laminated film obtained by laminating a laminated layer on one surface of the heat-sealable film according to claim 7.

9. The heat-sealable laminated film according to claim 8, wherein the laminated layer comprises a propylene homopolymer.

10. A heat-sealable laminated film obtained by laminating a substrate layer on one surface of the heat-sealable film according to claim 7, directly or through a laminated layer.

11. A lid material for container, which comprises the heat-sealable laminated film according to claim 8 or 10.

12. A package comprising the heat-sealable laminated film according to claim 8 or 10 and a part to be sealed having a propylene polymer layer, and having a heat-sealed structure between the laminated film and the propylene polymer layer.
